HR Insights & Attrition Analysis Dashboard

Overview

This project focuses on developing an HR analytics dashboard to evaluate employee attrition patterns, workforce demographics, and organizational performance trends. The dashboard consolidates key HR indicators into a centralized reporting interface for structured analysis and decision-making.

Problem Context

Employee attrition and workforce distribution data are often reviewed through fragmented reports, limiting visibility into turnover drivers and demographic trends. Manual analysis makes it difficult to identify patterns across job roles, salary bands, and tenure groups.

To address this, a Power BI dashboard was developed to centralize HR metrics and enable interactive exploration of workforce insights.

Objectives

- Analyse overall attrition rate
- Identify demographic-based attrition trends
- Evaluate salary slab and tenure impact on attrition
- Compare workforce distribution across departments
- Provide structured KPI monitoring

Tools & Technologies

Tool	Purpose
Power BI	Dashboard development & visualization
Microsoft Excel	Data preparation & structuring
DAX	KPI calculations & segmentation analysis

Key Metrics Monitored

- Total Employees (1416)
- Total Attrition (229)
- Attrition Rate (16.2%)
- Average Age (37)
- Average Salary (6.5K)
- Average Years at Company (7.0)

Dashboard Capabilities

- Attrition analysis by gender and job role
- Age group and education field distribution
- Salary slab-wise attrition segmentation
- Years-of-service attrition trend analysis
- Department-level workforce comparison
- Interactive filtering for dynamic exploration

Observations

- Overall attrition rate stands at 16.2%, indicating moderate workforce turnover.
- Higher attrition observed within specific job roles and lower salary slabs.
- Mid-career age groups contribute significantly to attrition volume.
- Early-tenure employees show higher likelihood of exit compared to long-tenure employees.
